

ProofReady already gives every student criteria-anchored feedback in the voice of an experienced HSC marker. The **Insights dashboard** turns those thousands of individual feedback events into a school-wide picture for Heads of Department, deputies and principals — surfacing patterns in *what students are being asked to do*, *how they're engaging with it*, and *what their writing keeps showing*. Every tile is descriptive. Every claim is grounded in retrievable data. None of it grades a student or ranks a teacher.

What ProofReady Insights is — and isn't

- **Descriptive, not evaluative.** Shows what's happening, not who to praise or blame.
- **No teacher league tables.** Class-level views describe student work, not teacher quality.
- **One source of evidence among many.** Supports professional judgement; never replaces it.
- **No marks or band predictions.** Ever.
- **No student rankings.** Cohort-level patterns, not individual scoreboards.
- **Role-scoped access.** Leaders see their own school only; teachers retain their existing view.

THE ASSESSMENT PROGRAMME VIEW

What you're asking of students this year. Drawn from the tasks faculties create in ProofReady.

Syllabus outcome coverage

Which NESA outcomes have been assessed, by whom, and how often — across a course, a faculty, or the school.

Coverage gaps

Syllabus-mandated outcomes that haven't appeared in any assessment this year, flagged before the term ends.

Over-assessment

Outcomes hit repeatedly while others are neglected. Useful evidence for assessment programme review.

Directive verb mix

The balance of *describe*, *explain*, *analyse*, *evaluate*, *assess* and others across this term's tasks.

Task type balance

Distribution of essay, source analysis, report, research and other task types across the year.

Assessment load distribution

When assessments cluster, when there are gaps, and how the calendar lands on students.

Task verb alignment

Does the task wording actually elicit what its directive verb asks? A check on task pitch and clarity.

Assessment programme balance

Outcomes × verbs × task types — a single grid showing what's covered and what isn't.

THE STUDENT ENGAGEMENT VIEW

How students are working — without grading them. Patterns of timing, iteration, and follow-through.

Submission timing

How early or late students submit relative to due dates. Cohort and class-level patterns.

Draft progression

How many students reach a second or third draft, and which tasks prompt the most iteration.

Resubmission patterns

Rate and frequency of resubmission across the cohort — an indicator of feedback uptake.

Time-to-resubmission

How quickly students return to their work after feedback. A signal of momentum and motivation.

Feedback engagement rate

Whether students view their feedback before submitting a next draft.

Engagement consistency

Students using ProofReady regularly vs sporadically — cohort patterns, not individual surveillance.

THE FEEDBACK THEME VIEW

The pattern layer underneath the numbers. ProofReady reads across every piece of feedback the AI has produced and surfaces what it keeps saying — per class, per cohort, per faculty.

Recurring class-level themes

The five or ten issues the AI keeps flagging in this class's drafts. Anchored to specific student work, so the patterns are verifiable.

Theme evolution over the term

What's resolving, what's persisting, what's newly emerging. Week-3 themes vs Week-10 themes, side by side.

Verb-specific pitfall patterns

When the task asks students to *evaluate*, what do they actually do instead? Cohort-wide misalignment, surfaced.

Subject-terminology adherence

Are students using the technical vocabulary the syllabus expects? Drawn from ProofReady's subject glossaries.

NESA key term miscue patterns

Common substitutions: students treating *assess* as *describe*, *analyse* as *list*. Specific and actionable.

Cross-class theme distinctiveness

What's unusual about this class compared to others in the faculty? Surfaces differentiation needs without ranking.

Cross-faculty literacy patterns

The same writing weakness appearing across History, English, Biology — the evidence base for whole-school literacy initiatives.

Theme × outcome correlation

Which feedback themes attach to which syllabus outcomes — useful when planning targeted teaching.

THE AI NARRATIVE LAYER

The distinctive feature. Most education analytics tools produce numbers; ProofReady produces prose — short, grounded narratives written for time-poor school leaders. Every claim is anchored in the underlying data, so the reader can verify any sentence by drilling down.

EXAMPLE — TERM SUMMARY NARRATIVE, YEAR 11 MODERN HISTORY

Across 28 student responses to the Term 1 source analysis task, the cohort consistently identifies sources well but struggles to **weigh sources against each other**. When the task verb is **assess**, responses are dominated by description and explanation; explicit judgement language appears in fewer than a third of drafts. The pattern is consistent across all three Year 11 classes, suggesting it's a programme-level rather than class-level concern. Worth a faculty conversation about explicit modelling of evaluative phrases before the Week 7 source-based task.

Term summary narrative

A one-page exec read of what happened across the term, per faculty or for the whole school.

Class-specific recommendations

Concrete, descriptive next-step suggestions for each class, drawn from its actual feedback patterns.

PD focus suggestions

Three suggested professional learning topics based on the term's most common feedback themes.

Differentiation grouping suggestions

"These six students across the cohort share a thesis-clarity issue and could be grouped for a targeted workshop."

Comparative analysis narrative

This cohort vs the same cohort earlier in the year — what's shifted, what hasn't, what to make of it.

Anomaly explainer

When a pattern shifts, the AI offers candidate explanations grounded in the timeline of tasks and feedback.

DASHBOARD PREVIEW

A leader's view of one faculty in Term 1. The figures are illustrative; the structure, content shape and language are what's being designed with pilot schools.

Thesis clarity31% → 18% · resolving

11MHIS.1 · CLASS PATTERN

Strong on source identification.

Recurring theme: chronology takes precedence over argument structure.

11MHIS.2 · CLASS PATTERN

Strong terminology use. Recurring theme: thesis clarity weakens after the first body paragraph.

11MHIS.3 · CLASS PATTERN

Lower engagement signal: drafts arrive close to deadline, fewer resubmissions than peer classes.

Illustrative preview. Tile selection, layout and language are customisable per school during pilot.

REPORTING & EVIDENCE

Insights you already need to produce, with the evidence trail done for you. Every export cites the underlying tasks and feedback events so the reasoning is auditable.

Faculty review evidence pack

Coverage, themes, engagement and narrative for a single faculty across a period — ready for faculty review meetings.

ASIP supporting data

Annual School Improvement Plan evidence on literacy, assessment programme balance and feedback culture.

A–E grade decision support

Qualitative evidence supporting the teacher's grade decision. ProofReady never proposes a grade.

Parent-teacher interview prep

Cohort-level patterns a teacher can refer to when discussing a student's progress with parents.

Accreditation evidence

Evidence packs aligned to registration and accreditation cycles — literacy, assessment, feedback practices.

Programme review evidence

What worked, what didn't, what's missing — the data side of a programme review, formatted for the conversation.

ACCESS, SCOPE & PRIVACY

Who can see what

Insights access is granted to a defined school leadership group — not all staff. Teachers retain their existing class view. Students never see leader-level data.

School-scoped

Every leader sees their own school's data only. No cross-school comparisons. No external benchmarking against schools you don't recognise.

Faculty-respectful

Class-level views describe the student work, not the teacher's performance. Comparisons are framed as patterns to explore, not judgements to act on.

No AI training on student work

Anthropic's API policy excludes API inputs and outputs from model training. Insights aggregates existing feedback — no additional data leaves the system.

Auditable

Every aggregate tile and every AI narrative claim is traceable to the underlying tasks and feedback events that produced it.

Opt-in by tile

The school chooses which Insights tiles are enabled. Start with assessment programme and themes; add others as the leadership team finds use for them.

WHAT THIS ISN'T

No mark predictions

No band judgements

No teacher rankings

No student league tables

No cross-school benchmarking

No demographic profiling without policy

No content rewriting
